Controlling Weeds That Spread By Seed

from MyGardenGuide.com

What you need:

- Hoe
- Mulch
- Pre-emergent herbicide

Unwanted seedlings are a big nuisance in a garden, whether the plants are common weeds like purslane or crabgrass, baby trees or shrubs, or garden plants that have self-sown. Where there is one weed seedling, there are likely to be more.

When seedlings appear, eliminate them promptly by pulling them out or cutting them off with a hoe or weeding tool.
